

Hybrid Cloud Consulting

Customer: A sales conversion acceleration platform

Problem Statement

Customer runs close to 150 servers across 5 data centers (3 on AWS). Being in the cloud telephony industry, they require the application latency to be less than a milli-second - on par with hedge fund systems. So, managing the complete setup with several VPN connections, security requirements and performance expectations was crucial.

Proposed Solution

Powerup provided hybrid cloud consulting services to the customer and is responsible for 24*7 availability of their applications across AWS and their data centers in US. Powerup manages over 80 servers, MS SQL Server databases, Asterisk servers (Telephony) for customer in their hybrid setup with a record uptime of 99.99%.

Cloud platform

Hybrid – AWS and VMware Data Center.

Technologies used

Windows Server, RHEL, Oracle, MS SQLServer, RDP.
